As per distribution list

Sub: Agenda of 86th meeting of Operation and Coordination Committee of MP.

...

The Agenda of 86th meeting of the Operation and Coordination Committee of MP scheduled on 06th September 2023 at Conference Hall, SLDC, MPPTCL, Jabalpur has been uploaded on the website of SLDC 'www.sldcmpindia.com' and can be downloaded.

V. K. Agrawal
Superintending Engineer (Opn)
& Member Secretary, MP-OCC,
SLDC, MPPTCL, Jabalpur.

Distribution List

- 1. The Chief Engineer (Works), MP Power Transmission Co. Limited, Shakti Bhawan, Jabalpur, email-ceehtmi@yahoo.com.
- The Chief Engineer (T&C), MP Power Transmission Co. Limited, Jabalpur. Fax No- 0761-2665593, 2702710 Emailcetandc@gmail.com
- 3. The Chief Engineer (Transmission-East Zone), MP Power Transmission Co. Limited, Shakti Bhawan, Jabalpur. Email- sk.gaikwad@mptransco.nic.in.
- 4. The Chief Engineer (Transmission-West Zone), MP Power Transmission Co. Limited, Indore.
- 5. The Chief Engineer (Transmission-Central Zone), MP Power Transmission Co. Limited, Bijlee Nagar, Govindpura, Bhopal, email- setncbpl@gmail.com.
- The Chief Engineer (Plg & Des), MP Power Transmission Co. Limited, Jabalpur, Fax No- 0761-2660908 Emailceps321@yahoo.com
- 7. The Chief Engineer (Procurement.), MP Power Transmission Co. Limited, Jabalpur, .Fax No- 0761-2660908 Email substation vi@yahoo.com
- 8. The Chief Engineer(EHT:Const.), MP Power Transmission Co. Limited, Jabalpur. Fax-0761-2661618, E-mail-ce.ehtc@mptransco.nic.in.
- 9. The Chief Engineer(EHT:Maint&insp.), MP Power Transmission Co. Limited, Jabalpur. Fax-0761-2665593, E-mail-ce.mni@mptransco.nic.in.
- 10. The Executive Director (O & M:Gen), MP Power Generating Company Limited, Jabalpur. Fax No- 0761-2664749, Email- gcc.mppgcl@gmail.com, Email- edomg_mpeb@rediffmail.com
- 11. The Chief Engineer (O&M:Hydel), MP Power Generating Co. Ltd, Jabalpur, Fax No-0761-2664749.
- 12. The General Manager(PM), MPPMCL, Jabalpur Email gm_pm@mptradeco.com_controlroom.tradeco@gmail.com
- 13. The Superintending Engineer (GCC), MPPGCL, Jabalpur Email segcc.mppgcl@gmail.com gcc.mppgcl@gmail.com.
- 14. The General Manger (DCC-EZ), DISCOM Control Centre, MP Poorva Kshetra Vidyut Vitaran Co.Limited, Jabalpur, Fax No- 0761-2668503, Email cmdez Id@yahoo.co.in.
- 15. The Dy. General Manager (DCC –CZ), DISCOM Control Centre, MP Madhya Kshetra Vidyut Vitaran Co. Limited, Bhopal, Fax No-0755-2580611,Email- plm.mpcz@gmail.com.
- 16. The Executive Engineer (DCC-WZ), DISCOM Control Centre, MP Paschim Kshetra Vidyut Vitaran Co. Limited, Near Polo Ground, Jail Road, Indore, Fax No- 0731-2421554, Email- dccindore@gmail.com.
- The Executive Engineer, Sub Load Despatch Centre, MPPTCL, Indore, Fax No- 0731-2874515, Email eesubldcind@yahoo.com.
- The Executive Engineer, Sub Load Despatch Centre, MPPTCL, Bhopal, Fax No- 0755-2885220, Email aldc bpl@yahoo.co.in
- 19. The General Manger(RO), MPPMCL, In front of Bhojpur Club, E-4, Arera Colony, Bhopal, Fax No-0755-2423046, <u>Email-Rajeev keskar@rediffmail.com</u>
- 20. The Chief Engineer (PM&C), Narmada Hydroelectric Development Corpn. Ltd, NHDC Parisar, Shamla Hills, Bhopal 462013., Fax No- 0755-4030130,Email omco.nhdc@gmail.com 5vinodnhdc@rediffmail.com
- The Chief Electrical Distribution Engineer, West Central Railway (WCR), General Manager's Office, Electrical Department, Jabalpur-482001 (MP), Fax: 0761-2627629, Email- cede@wcr.gov.in, dyceetrdwcr@gmail.com, M-9752415312, Mr.Satyendra Kumar (Dy.CE), Mob.9752415301 (CEDE, WCR).
- 22. The General Manager, Indira Sagar Power Station, NHDC Office complex, PO: Narmada Nagar, Distt: Khandwa (MP) 450 119, Fax No- 07323-284080, Email nhdc-isp@rediffmail.com
- 23. The General Manager, Omkareshwar Power Station, Prashsnik Bhawan, Urja Vihar, Sidhwarkut, Distt: Khandwa (MP) 450 554, FaxNo-07280-271703, Email- pksaxena@nhdcl.com, saxena_pks123@rediffmail.com, omkareshwar.nhdc@gmail.com.
- 24. The Director (Projects), BLA Power Limited, At: Niwari, PO: Khorsipan, Tah: Gadarwara, Distt; Narsinghpur 487 551, Fax No. 07791-243667 / 243669, Email manish@bla.co.in
- 25. The Sr. Vice President, Jaiprakash Power Ventures Ltd., Village Sirchopi Subpost Office-Agasod, Post Office-Bina-470113 Distt- Sagar, Fax No. 07580-277200, Email <u>jbtppbina400kvswitchyard@gmail.com</u> jptpp.switchyard@jalindia.co.in,
- 26. The General Manager Operation Satpura Transco Pvt. Ltd., Satpura Colony, Betul Road, Old Itarsi, Distt. Hoshangabad, Email <u>piyush.pandya@clpindia.in</u>, <u>sachin.ashish@clpindia.in</u>.
- 27. M/s Ujaas Energy Ltd. 701, NRK Business park, Vijay Nagar Sqaure, Indore 452010, Email id :-solar@ujaas.com
- 28. M/s Suzlon Global Services Ltd., 1090, Scheme no. 114, Park-2, Ring Road, Universal Hospital Row.

AGENDA FOR 85th MEETING OF OPERATION & COORDINATION COMMITTEE OF MP TO BE HELD ON 18th AUGUST 2023 AT 11:00 AM AT CONFERENCE HALL, SLDC, MPPTCL, NAYAGAON, JABALPUR.

ITEM NO. 1 : CONFIRMATION OF MINUTES : Minutes of 85th meeting of Operation & Coordination Committee of MP were forwarded to the committee members vide No. 07-05/SG-9B-II/787 Jabalpur dated 14.06.2023 respectively.

No comments have been received.

[OCC may confirm the minutes]

ITEM NO.2: REVIEW OF SYSTEM OPERATION DURING THE MONTHS APRIL 2023 TO JULY 2023.

2.1. Frequency Particulars: The detailed frequency particulars for the month of **APRIL 2023 TO JULY 2023** are enclosed at **Annexure-2.1**. The brief detail of frequency profile is given here under:-

Month	Average frequency	Minimum Integrated frequency over an hour	Maximum integrated frequency over an hour	Instantaneous Minimum Frequency	Instantaneous Maximum Frequency
APRIL 2023	50 Hz	49.67 Hz	50.26 Hz	49.49 Hz	50.33 Hz
MAY 2023	50 Hz	49.64 Hz	50.37 Hz	49.43 Hz	50.40 Hz
JUNE 2023	50.01 Hz	49.6 Hz	50.37 Hz	49.51 Hz	50.41 Hz
JULY 2023	50.01 Hz	49.7 Hz	50.35Hz	49.58 Hz	50.42 Hz

[Committee may like to note]

2.2 Operational Matters

2.2.1 Operational Discipline: Frequency profile for the months **APRIL 2023 TO JULY 2023** is as given below for discussion by the committee:

%age of time when frequency was	Apr-23	May-23	Jun-23	Jul-23
Above 50.30 Hz	0.04	0.08	0.10	0.11
Between 50.05 Hz and 50.30 Hz	21.68	21.72	25.31	17.25
Between 50.00 Hz and 50.05 Hz	26.50	27.24	29.17	35.01
Between 49.9 Hz and 50.00 Hz	41.25	41.10	38.71	42.25
Between 49.5 Hz and 49.9 Hz	10.53	9.85	6.71	5.38
Between 49.2 Hz and 49.5 Hz	0.00	0.00	0.00	0.00
Below 49.2 Hz	0.00	0.00	0.00	0.00

[Committee may like to note]

2.2.2 Voltage Profile: the maximum and minimum voltage as recorded at important 400 KV s/s in MP Grid from **APRIL 2023 TO JULY 2023** is enclosed as **Annexure – 2.2.2.**

[Committee may please note & discuss]

2.2.3 STATUS OF CAPACITOR BANKS IN SUB-TRANSMISSION SYSTEM: The updated information of the status of capacitor banks in sub-transmission system as on 31th JULY 2023 as submitted by DISCOMs is detailed below:

	Capa install condi		good		Banl but r serv	acitor ks hea not in ice du	e to	install defect	citor b ed but ive & a able (N	: are	repair against	t again non- repaira	st able	Capaci banks a covered ADB T-	already d under V	banks cover	itor to be

	KVAR	KVAR	KVAR	KVAR	KVA	KVA	KVA	KVAR	KVAR	KVAR	KVAR	KVAR	KVAR	KVAR	KVAR	KVAR	KVAR
					R	R	R				Units						
											required						
EZ	416	132	111	1	2	5	4	4	8	0	6	24	7	0	0	-	0
CZ	0	498	1103	211	-	•	•	0	0	0	0	0	0	0	0	0	538
WZ	533	515	801	-	0	0	0	52	61	59	1010	10	21	0	0	-	0

Discoms are requested to provide updated status of capacitor bank in the meeting. The committee may like to discuss.

[Action: DISCOMS]

2.2.4 Status of Shunt Capacitor Banks installed at various EHV Transmission Substation: The updated information of the status of installed capacitor banks (in MVAR) in EHV transmission system as on **30.06.2023** as submitted by MPPTCL is given below: -

Voltage	Capacitor bank	Capacity Added	TOTAL	Capacitor Bank
Class	installed as on	after Last OCC	CAPACITY AS	Installed but
	31.12.2022	Meeting (MVAR)	ON <u>31.03.2023</u>	defective & are not
	(MVAR)		(MVAR)	repairable (No &
				MVAR)
220 KV	0.00	0.00	0.00	
132 KV	1139.00	0.00	1139.00	All in Service
33/36 KV	7632.50	36.00	7668.50	
TOTAL	8771.50	36.00	8807.50	

Data not provided by T&C.

[Action: MPPTCL]

2.2.5 U/F and df/dt Relay Operation

(i) U/F and df/dt Relay Operation: During APRIL 2023 TO JULY 2023, frequency did not touch 49.40 Hz. There was no df/dt operation during the same period. MPPTCL informed that under Frequency Plan for all the stages have been implemented and in operation.

[Action: MPPTCL]

(ii) **Defective u/f, df/dt Relays:** MPPTCL has informed that all the df/dt and U/F relays are in operation, where the U/F relays are not available, the numerical relays programmed for under frequency operation. All U/F stages are in good/ healthy & working condition.

[Committee may like to note]

2.3 POWER CUTS / LOAD RESTRICTIONS/DIFFERENTIAL LOAD SHEDDING BY DISCOMS & GROUP ALLOCATION TO 33 KV FEEDERS: -

(i) Details of DISCOM wise Power supply given to various domestic categories during the period **APRIL 2023 TO JULY 2023** is enclosed at **Annexure 2.3(i)**.

[Committee may like to note]

(ii) **Group Allocation to Newly Commissioned existing EHV substations:-** The region wise list of 33 KV feeders emanating from various newly commissioned/existing EHV substations for which groups have not been allocated provided by T&C. The DISCOM wise details of pending group allocation to 33 KV feeders as provided by DISCOMS is given below:-

SN	DISCOM	Region	No of 33 KV feeders for which groups
			to be allocated
01		Jabalpur	16
02		Sagar	11
	EAST	Seoni	06
03		Satna	42
04		Total	82
05		Indore	04
06	WEST	Khandwa	22
07	WEST	Mandsaur/Ujjain	10
08		Total	36
09		Bhopal	25
10	CENTRAL	Gwalior	00
	CENTRAL	Guna	05
11		Total	30
	TOTAL	Grand Total	141

DISCOMs are requested to furnish the details as per list enclosed at **Annexure-2.3(ii)** in the meeting. In view of the above it is requested that the order copy for which group have been allocated may please be submitted to T&C, MPPTCL under intimation to SLDC.

[ACTION: DISCOMs, T&C-MPPTCL]

ITEM NO. 3: OPERATIONAL PLANNNING:

3.1 Generating Units under planned outage and proposed maintenance program: The latest status for annual maintenance /outages of thermal generating units of MPPGCL as provided by ED(O&M:Gen) for FY-2023 – 2024 is enclosed as **Annexure-3.1.**

[Committee May like to note]

3.2 Proposed shutdown program of Transmission lines / **Transformers:** The proposed shutdown of transmission elements for the period 01.06.2023 to 31.08.2023 as submitted by T&C, MPPTCL is enclosed as **Annexure-3.2.**

[Committee May like to discuss]

3.3 Long Outages of transmission elements and protections: The status submitted by MPPGCL /MPPTCL are given below:-

Sr.	Line/Transformer/ etc	Outage date	Reason	Response from Utility
No	under long Outage			
1	220 KV ATPS – Railway Traction Ckt - 1	15.05.2019	B-Phase LA Burst	MPPGCL in 79th OCCM intimated that the line is ready for charging from ATPS end. Railway replied that the line cannot be charged from railway end as it was suspected that high voltage impulse is generated in charging the line which is the cause of frequent failure of power transformers. Railway reply letter is attached as annexure 3.3 RAILWAY may submit the latest status
2	50Mvar line reactor of 400 KV Indore – ISP Ckt-II at 400 KV Indore end	02.02.2022	Y-PH BUCHOLZ, IT GOT BURST AND CAUGHT FIRE.	To be replaced by another reactor. T&C / P&D may submit the latest status
3	3X40MVA, 220/132KV, MITSUBISHI X'mer at 220 KV S/s Itarsi	28.04.2023	Differential and Buchholz trip indication.	X'mer is being replaced by 160MVA X'mer by Aug-2023. MPPTCL may please update the status.
4	50MVA, 132/33KV BBL X'mer at 132 KV S/s Damoh	26.05.2023	Buchholz trip indication	X'mer is being replaced by 50MVA X'mer by Aug-2023. MPPTCL may please update the status.

40MVA, 132/33KV BHEL X'mer 220 KV S/s Ratlam	28.06.2023	Buchholz trip indication	X'mer is being replaced by 50MVA X'mer by Sep-2023. MPPTCL may please update the status.
40MVA, 132/33KV BHEL X'MER AT 132KV S/S BARMAN	13.03.2023	Differential and Buchholz trip indication. Key gases found increased.	Replaced by another 40MVA X'mer on 16.05.2023
63MVA, 132/33KV BBL X'MER AT 220 KV S/S INDORE-SZ	05.04.2023	Differential indication.	Replaced by another 40MVA X'mer on 12.05.2023

Any transmission element/ EHV element under outage, which has not been intimated/included under aforesaid outage list, should be invariably intimated to SLDC. All entities are requested to ensure the same. The utility may submit the latest status.

[Action:MPPGCL/MPPTCL]

ITEM NO. 4: OPERATIONAL STATISTICS FROM APRIL 2023 TO JULY 2023:

The details of actual generation, Schedule from Central Sector, demand etc. are given in the following Annexures:

- Annex. 4.1 Unit wise actual Generation of MPPGCL thermal Units and station wise Generation of MPPGCL & NHDC Hydel Units.
- Annex. 4.2 Power Supply Position(Energy Balance Sheet).
- Annex. 4.3 Hourly Average of Availability and Demand.
- **Annex. 4.4** Hourly average schedule Vs Drawal of DISCOMs.

[Committee may like to note]

ITEM NO. 5: SYSTEM DISTURBANCE IN MP

5.1 REPORTING OF FLASH REPORT, DR AND EL FOR 400KV, INTERSTATE TRANSMISSION ELEMENTS & DETAILED TRIPPING REPORT:- As per the provisions of Regulation 5.2 (r) of CERC (Indian Electricity Grid Code) Regulations 2010 and Regulation of 5(9) of CERC (Indian Electricity Grid Code) (First Amendment) Regulations, 2012 all the Regional Entities of the Region shall furnish the tripping details including DR & EL output to RLDC with in 24 hrs of the event for analysis and identify the real-time measures required in future to ensure secured grid operation. The flash report is also required to be furnished to SLDC within an hour of tripping. Sometimes It is observed that FLASH REPORT are being made available but not DR & EL of tripping of transmission grid element by the State Grid Entities.

It has been intimated by WRLDC that in case of tripping of Inter State & inter Regional lines of voltage class 220 KV & above level, a tripping report along with the DR/EL files shall be submitted to WRLDC within 24Hrs. Also the DR/EL shall be submitted to WRLDC tripping portal, details of which were previously

circulated. The incidences / tripping's which occurred during the month of APRIL-2023 to JULY-2023 for which the details have not been submitted are:-

S NO	Event at s/s	Date	Flash report	DR/EL	REMARK
1	220kV Malanpur- Auraiya S/C	01-05-2023	submitted	submitted	A/R not attempted. MPPTCL may kindly look into the issue
2	220 kV Bhanpura- Ranpur	26-05-2023	submitted	submitted	Line A/R successfully and tripped due to recurrence of fault in reclaim time.
3	220kV Malanpur- Auraiya S/C	05-07-2023	submitted	submitted	A/R not attempted for single phase fault, MPPTCL/NTPC may kindly look into the issue
4	220kV Mehgaon- Auraiya S/C	06-07-2023	submitted	submitted	A/R not attempted for single phase fault, MPPTCL/NTPC may kindly look into the issue

[T&C,MPPTCL/MPPGCL]

ITEM NO. 6.0: IMPORTANT OPERATIONAL ISSUES:-

6.1 STATUS OF COMPLETION OF ONGOING SCHEMES FOR COMMISSIONING OF REACTORS / TRANSMISSION ELEMENTS:The present status regarding schedule and commissioning of reactors / transmission elements is as below:-

S.No.	400 KV S/s	Size MVAR	Implementi Expected Date of Commissionin		
			ng Agency as intimated in last OCC		
1.	Line reactor on 400 KV S/s Satna (PG) – Sagar Ckt at 400 KV S/s Sagar end.	50 MVAr Line Reactor	MPPTCL P&D informed that the reactor is in the tendering stage, it will be completed by Dec-22, after that it will require 12 months for commissioning work. T&C and P&D MPPTCL please submit the latest status		
2.	400KV S/s Sagar	125 MVAr Bus Reactor	MPPTCL	Some shifting work is required after that Reactor will be ready for commissioning. It is also to intimate that a revised/recent El approval shall be provided prior to its charging as the	

				element was not in service for more than 6 months. T&C and P&D MPPTCL please submit the latest status
3	400 KV S/S KIRNAPUR	125 MVAr Bus Reactor	MPPTCL	T&C and P&D MPPTCL please submit the status for commissioning of Reactor.

[Action: MPPTCL]

6.2 GUIDELINES FOR RESOURCE ADEQUACY PLANNING FRAMEWORK FOR

INDIA: In exercise of the powers conferred under the Rule 16 of Electricity (Amendment) Rules, 2022, the Ministry of Power, Government of India, in consultation with Central Electricity Authority (CEA) hereby issues the guidelines for Resource Adequacy for the Indian electricity sector.

For the past few years, India has been the fastest growing large economy in the World; and the growth will continue. Currently, it is the fifth largest economy in the World; and it is poised to become the third largest economy by 2030. This will only be possible if there is sufficient electricity to power this growth. It is essential that generation capacity is added at a pace matching the growth in demand- and in fact slightly ahead of the demand; so that the shortage of electricity does not slow down growth.

These guidelines shall be followed by all institutions and stakeholders. The complete Guidelines for Resource Adequacy Planning Framework for India is enclosed as **Annexure-6.2**. It is also pertinent to say that Resource Adequacy Planning Framework had been included in IEGC 2023 as an integral part. All the stake holders are requested to provide comments if any.

[Action: MPPTCL, MPPGCL,]

6.3 PROTECTION AUDIT:- In 132nd PCM held on 18/04/2018, it was decided that the protection audit of all critical S/S of 220 kV and all 400 kV level S/S newly commissioned S/S's immediately shall be carried out on specified interval of time (i.e. within one year of commissioning) and S/S's where protection audit has been carried out **5 years** back.

In view of the above protection audit of 09 no. substations/generating station (as detailed below) has been carried of in the month of July 2023. The list of substations wise observations is Enclosed as **Annexure** – **6.3.** All the concerned entities are requested to provide the status for rectification/compliance of the audit observations in the meeting.

T&C is requested to provide dates of last Third Party Protection audit conducted at 400KV Substations of MPPTCL.

6.4 HON'BLE CERC (INDIAN ELECTRICITY GRID CODE) REGULATIONS, 2023 PROTECTION CODE:- Hon'ble CERC vide notification dated 03.08.2023 have notified the date of

effective of the (Indian Electricity Grid Code) Regulations, 2023, as 01.10.2023. A new chapter on "Protection Code" has been included and all the users of the system are require to adhere with the clauses of the regulation. The important provisions are as follows.

Protection Protocol:-

- (1) All users connected to the integrated grid shall provide and maintain effective protection system having reliability, selectivity, speed and sensitivity to isolate faulty section and protect element(s) as per the CEA Technical Standards for Construction, the CEA Technical Standards for Connectivity, the CEA (Grid Standards) Regulations, 2010, the CEA Technical Standards for Communication and any other applicable CEA Standards specified from time to time.
- (2) RPC shall develop the protection protocol and revise the same, after review from time to time, in consultation with the stakeholders in the concerned region.
- (3) Violation of the protection protocol of the region shall be brought to the notice of concerned RPC by the concerned RLDC or SLDC, as the case may be.

Protection Settings:-

- (1) RPCs shall undertake review of the protection settings, assess the requirement of revisions in protection settings and revise protection settings in consultation with the stakeholders of the respective region, from time to time and at least once in a year. The necessary studies in this regard shall be carried out by the respective RPCs. The data including base case (peak and off-peak cases) files for carrying out studies shall be provided by RLDC and CTU to the RPCs.
- (2) All users connected to the grid shall "furnish the protection settings implemented for each element to respective RPC in a format as prescribed by the concerned RPC", "obtain approval of the concerned RPC for (i) any revision in settings, and (ii) implementation of new protection system, "ensure correct and appropriate settings of protection as specified by the concerned RPC" and "ensure proper coordinated protection settings". RPCs shall:
- (3) "maintain a centralized database and update the same on periodic basis in respect of their respective region containing details of relay settings for grid elements connected to 220 kV and above (132 kV and above in NER). RLDCs shall also maintain such database", "carry out detailed system studies, once a year, for protection settings and advice modifications / changes, if any, to CTU and to all users and STUs of their respective regions. The data required to carry out such studies shall be provided by RLDCs and CTU" and "provide the database access to CTU and NLDC and to all users, RLDC, SLDCs, and STUs of the respective regions. The database shall have different access rights for different users".
- (4) The changes in the network and protection settings of grid elements connected to 220kV and above (132 kV and above in NER) shall be informed to RPCs by CTU and STUs, as the case may be.

Protection Audit Plan:-

(1) All users shall conduct internal audit of their protection systems annually.

(2) All users shall also conduct third party protection audit of each sub-station at 220 kV and above (132 kV

and above in NER) once in five years or earlier as advised by the respective RPC.

(3) After analysis of any event, each RPC shall identify a list of substations / and generating stations where

third-party protection audit is required to be carried out and accordingly advise the respective users to

complete third party audit within three months.

(4) The third-party protection audit report shall contain information sought in the format enclosed as Annexure

5.1. in 153rd PCM Agenda of WRPC. The protection audit reports, along with action plan for rectification of

deficiencies detected, if any, shall be submitted to the respective RPC and RLDC or SLDC, as the case may

be, within a month of submission of third-party audit report. The necessary compliance to such protection audit

report shall be followed up regularly in the respective RPC.

(5) Annual audit plan for the next financial year shall be submitted by the users to their respective RPC by 31st

October. The users shall adhere to the annual audit plan and report compliance of the same to their respective

RPC.

(6) Users shall submit the protection performance indices of previous month to their respective RPC and

RLDC on monthly basis for 220 kV and above

System Protection Scheme (SPS)

(1) For the operational SPS, RLDC or NLDC, as the case may be, in consultation with the concerned RPC(s)

shall perform regular load flow and dynamic studies and mock testing for reviewing SPS parameters &

functions, at least once in a year. RLDC or NLDC shall share the report of such studies and mock testing

including any short comings to respective RPC(s). The data for such studies shall be provided by CTU to the

concerned RPC, RLDC and NLDC.

(2) The users and SLDCs shall report about the operation of SPS immediately and detailed report shall be

submitted within three days of operation to the concerned RPC and RLDC in the format specified by the

respective RPCs.

(3) The performance of SPS shall be assessed as per the protection performance indices specified in these

Regulations. In case, the SPS fails to operate, the concerned User shall take corrective actions and submit a

detailed report on the corrective actions taken to the concerned RPC within a fortnight.

Recording Instruments:- DR/EL synchronization and standard format for recording analogue and digital

signals guidelines to be issued by RPC.

Power System Stabilizers (PSSs), AVRs of generating units and reactive power controllers shall be properly

tuned by the generating station as per the plan and the procedure prepared by the concerned RPC. In case

the tuning is not complied with as per the plan and procedure, the concerned RLDC shall issue notice to the

defaulting generating station to complete the tuning within a specified time, failing which the concerned RLDC

may approach the Commission under Section 29 of the Act.

[Action:-All Stake holders]

6.5 REPORT ON AUTOMATIC UNDER FREQUENCY LOAD SHEDDING (AUFLS)

AND DF/DT SCHEME:- WRPC in 153rd PCM intimated that MS NPC informed that as per 10th NPC meeting, a subcommittee was formed to review the AUFLS and df/dt scheme. In 12th meeting of NPC, MS WRPC submitted the report on AUFLS and df/dt to the Committee.

The report of the committee was accepted by the NPC and it was agreed to implement the recommendation of the sub-committee with following observations:

- a. The first stage will be set at 49.4 Hz.
- b. Total 25% relief will be planned in 4 stages-49.4 Hz, 49.2 Hz, 49.0 Hz & 48.8 Hz.
- c. Pumping load will be tripped before first stage (> 49.4 Hz). Battery energy system in charging mode will go in discharging mode (> 49.4 Hz), no storage will be in storage/charging mode at frequency < 49.4 Hz.

The entities may take note of the recommendations of the report and such preparation shall be made by the concerned entities.

[Action:-All Stake holders]

6.6 LOAD DROPPING SCHEME AT 400 KV SUBSTATIONS TO HANDLE

EMERGENCY CONDITION:- The Load Dropping Schemes implemented is utmost important from grid security point of view and further in the ensuing rabi season for reliable/secure operation of the grid it is expected that major elements / areas in MP Grid needs to be operated nearly to full load condition and in radial mode, hence load drop scheme plays an important role by avoiding overloading and tripping of elements in N-1 condition and overload condition. Therefore, its healthiness and availability shall be ensured on regular interval of time.

Further discussed in 80th OCCM of MP, T&C is requested to provide the details (setting for operation of load drop scheme, feeders included, quantum of load relief to be obtained etc) of load drop scheme installed and to test the load trimming schemes installed on yearly basis and provide a report to SLDC by the month of September every year in the format as below with an e.g.

S.N O	SUBSTA TION	ELEMENT ON WHICH LOAD DROP INSTALLED	CRITERIA/SETTI NG AT WHICH LOAD DROP WILL OPERATE	ELEMENTS/FEEDE RS TO PROVIDE LOAD RELIEF	QUANTUM OF LOAD RELIEF TO BE OBTAINED	TESTE D (YES/ NO)	LOAD RELIEF OBTAIN ED DURING TESTING	REMARK
1	SATNA PGCIL	315 MVA ICT - 1, 2 & 3	110% OF CURRENT LOADING ON ANY OF THE ICT WITH 2.5SEC. DELAY	132 KV SATNA - PAWAI CKT 133 KV SATNA - NAGOD CKT 134 KV SATNA - MAJHGAWAN CKT	120MW			
2								
3								

In view of the above T&C, MPPTCL is also requested to review the existing load drop scheme and shall revise the load drop scheme if required according to the changes/augmentation the network under intimation to SLDC.

The committee may discuss the matter.

[Action:-CE(T&C)-MPPTCL]

6.7 MULTIPLE TRIPPING OF 132 KV KIRNAPUR – DINGARGARH CKT:- Multiple

trippings have occurred on 132 KV Kirnapur – Dongargarh Ckt which is a interstate line. It was intimated that the loading of the line is restricted to 240Amp/55MW to avoid overloading of 400/132KV, 100MVA ICT -1 &2 at Kirnapur. Details of tripping is as follows:-

S.No	Element Name	Date / Time of	Date / Time of
	Liement Name	tripping	Charging
1		09.08.2023/18:33Hrs	09.08.2023/19:30Hrs
2		10.08.2023/16:31Hrs	10.08.2023/17:23Hrs
3		11.08.2023/07:03Hrs	11.08.2023/07:52Hrs
4	132 KV Kirnapur – Dongergarh Ckt	11.08.2023/08:57Hrs	11.08.2023/10:18Hrs
5		11.08.2023/10:57Hrs	11.08.2023/17:17Hrs
6		12.08.2023/00:46Hrs	12.08.2023/01:31Hrs
7		12.08.2023/02:26Hrs	13.08.2023/14:26Hrs
8		13.08.2023/14:28Hrs	14.08.2023/22:52Hrs

T&C, MPPTCL may investigate the reason and provide the details.

[Action:-CE(T&C)-MPPTCL]

6.8 SYSTEM CONSTRAINTS OBSERVED AS PER STUDY FOR UPCOMING RABI

SEASON:- A simulation study has been conducted by MP SLDC for meeting the demand of 18500MW (MP periphery)/ 18100MW (Discom periphery) during the ensuing Rabi Season considering the new elements to be commissioned by December-2023.

For Meeting the demand of about 18500MW, the total internal generation has been considered as 6645.9MW. The ATC/TTC calculated by MP SLDC is about 12255.7/11885MW respectively with 370MW TRM and the most credible contingency noticed is at 400/220KV ICT – 1&2 at 400 KV Julwania. The simulation study has been conducted after considering the new/future elements to be commissioned by Dec-2023 as received from STU.

The constraints observed is as detailed below:-

- i. 220 KV Shujalpur Shujalpur (PG) Ckt 1 & 2:- As per study the load on these 220 KV circuits is 201 MW each under normal condition and under N-1 contingency it is about 399MW. The conductors of 220 KV Shujalpur Shujalpur (PG) Ckt 1 & 2 have been replaced by HTLS conductors to enhance its current carrying capacity. However the up-gradation of the bays at both end is still pending which is restricting the capacity of these circuits to about 800Amps. T&C-MPPTCI, EHT-MPPTCL is requested to provide the status for up gradation of bays at both end.
- ii. 220 KV Khandwa Nepanagar Ckt and 220 KV Chhegaon Npeanagar Ckt:As per study the load on these 220 KV circuits is 210 MW each under normal condition and under N-1 contingency it is about 299MW. Nepanagar & Bhuranpur is fed through these 2 no. 220 KV Circuits and 2 no. 132 KV circuits only and the load is increasing in the area. In case of contingency of any one of the 220 KV circuit the complete area will be interrupted. P&D-MPPTCL is requested to provide network strengthening plan for the area. Further T&C-MPPTCL is requested to provide the details load drop scheme implemented/to be implemented on 220 KV Khandwa Nepanagar Ckt and 220 KV Chhegaon Npeanagar Ckt to avoid any overload/cascade tripping in the area.
- **iii. 220 KV Betul (PG) Betul (MP) Ckt 1 & 2:-** As per study the load on these 220 KV circuits is 123 MW each under normal condition and under N-1 contingency it is about 243MW. T&C is requested to ensure healthiness of the load drop implemented/to be implemented.
- iv. 220/132KV, 160MVA and 200MVA X'mer at 220 KV S/s Rewa:- The loading of 220/132KV, 200 MVA X'mer is about 178MW & loading of 220/132KV, 160 MVA X'mer is about 140MW in normal condition. Under N-1 contingency loading is about 200MW. T&C-MPPTCL is requested to ensure the healthiness of the load drop scheme implemented and P&D-MPPTCL is requested to provide network strengthening plan for the area
- v. Single Bus System At Rewa Mp And Loading Issue:- 220kv Rewa MP is the s/s which is connected with different kind of entities like MPPGCL, PGCIL and other nodes of MPPTCL. This s/s is having only one main bus system on 220kv voltage level. Further, in month of September-22, 220KV REWA MP-REWA RUMS CKT 1 and 2 having HTLS conductors has been charged. After this connection, fault level has been increased at Rewa and it is exporting power to all other nodes.

In this situation the importance of 220kv Rewa MP s/s is very prominent looking to the reliability of network of that area. At this point if any planned or emergency s/d comes on bus then s/s left with no other option instead to keep the entire 220kv network out of service.

As Rewa is the vital source of supply to that area now, hence possibility of construction of 220kv Main Bus no 2 may be explored, it will definitely improve the reliability of power of this area.

vi. 160MVA, 220/132KV X'mer-1&2 at 220 KV S/s Nepanagar:- During the 2022-2023 peak demand period the load of the X'mers were 135MW each. Under N-1 contingency the x'mer will get

overloaded and creat interruption in Nepanagar area. P&D may please update the plan for addition of

capacity/X'mer at 220KV S/s Nepanagar.

P&D /T&C may please intimate any plan for new bus.

[Action: MPPTCL (T&C, P&D)]

6.9 Tripping of 400 KV SATPURA - ASHTA TRANSMISSION LINE :- "400 KV DCDS

Sarni to Ashta Transmission line, circuit II tripped on 30th April 2023 at 17:05 Hrs. due to heavy rain,

Lightning, and thunderstorm.

Upon receiving the tripping information, our ground patrolling team from Shahpur hub reached the tower

location nearing the identified fault zone, as observed in Zone 1 Protection Relay. However, no physical

deformities were found along the transmission line. Based on our feedback, the transmission line was

successfully recharged at 23:37 Hrs. on 30th April 2023.

The following observations was found during this tripping:

1. Sarni end (Satpura Thermal Power Plant) observations: While reviewing the relay tripping

indications, it was observed that the Auto Recloser at the Sarni end did not operate, despite the fault

being identified as a Single Phase to Earth (B-N) fault. Additionally, the Auto Recloser Block did not

appear on the relay. It appears that there may be a problem with the Auto Recloser relay at the Sarni end.

2. Ashta end (400 KV GSS Substation) observations: According to the relay indications received from

Ashta end, it was indicated as "Broken Conductor" fault. However, no broken conductor was found

during the patrolling of the transmission line, which has been energized since 30th April 2023.

3. The Disturbance Recorder / Event Log & Tripping Report at both ends need to be analysed.

4. It is also observed that few towers of 220 KV Transmission line near to our Transmission line at Sarni

got collapsed during this event. "

[Action: MPPTCL (T&C-MPPTCL, MPPGCL, Kalptaru)]

ITEM NO. 7: BLACK-START MOCK DRILL OF HYDEL POWER STATIONS:

7.1 BLACK START MOCK DRILL OF HYDEL STATIONS OF MP:- During 2023-2024 Black

Start Mock Drill proposed to be conducted at various Hydel power station of MP is detailed as mentioned

below:-

Agenda of 86th OCCM of MP

13

S.NO.	NAME OF HPS	PROPOSED/TENTATIVE DATE OF MOCK DRILL
1.	PENCH HPS	Mock drill proposed by Maharashtra on 06.09.2023
2.	BARGI HPS	Conducted in May 2023
3.	BIRSINGHPUR HPS	Conducted in Dec 2022
4.	MADIKHEDA HPS	Conducted 22.08.2023
5.	TONS HPS	MPPGCL shall intimate the date
6.	ISP HPS	Cannot be conducted due to failure / non-availability of Line Reactor of 400 KV ISP – Indore Ckt – 2 at Indore end.
7.	OSP HPS	NHDC proposed the Month of October for the Mock Drill.
8.	RAJGHAT HPS	Proposed for Sep-2023/ MPPGCL shall intimate the date

[Committee may like to discuss]

ITEM NO. 8: AVAILABILITY BASED TARIFF (ABT) RELATED ISSUES:

8.1 Non availability of Interface meter data due problem in AMR facility and JMR data:

- 1. As already informed in previous OCCM that data of around 25 Nos. ABT meters installed at the interface points of Xmers / Feeders are not being downloaded through AMR system of SLDC due to problem in SIM card, no network or meter defective. The list of these interface points is shown in **Annexure-I**. These meters are included in AMC contract. CE(T&C) office is requested to issue instructions to field officers for resolving the issues so that meter data is downloaded remotely at SLDC.
- 2. Around 07 Nos. ABT meters are installed at the interface points of newly commissioned substation / Xmers as shown in **Annexure-II** are not include in AMC list. The list of meters is already sent to CE(T&C) office vide email dated 31.08.2023. CE(T&C) office is requested to include the list of newly installed meters in the existing AMC contract (Order No. 04-04/ TC-AMR/ SII/ Addl. Order/1799/310 dated 04/05/2022 so as to ensure complete data availability of meters.
- 3. Non receipt JMR data of newly commissioned substation / Xmers of MP Power Transmission Package -II Limited, MPPTP-IIL is requested to furnish the JMR data every month for checking / verification of meter data as per format enclosed herewith in **Annexure-III**.

[Action : CE(T&C) MPPTCL & MPPTP-IIL]

8.2 NON RECEIPT OF ABT METER DATA OF RAILWAY TSS THROUGH AMR SYSTEM

& JMR: Railway has informed in the previous OCCMs that the proposal of AMC contract to M/s Secure Meters Ltd. is under process. Railways has also ensured for timely receipt of meter data / JMR data at SLDC on weekly / Monthly basis for issuance of accounts. However, inspite of repeated requests from SLDC, the

complete meter data of Railways is not received by SLDC. Railways is once again requested to provide following assistance to SLDC for timely issuance of accounts on weekly / Monthly basis

- **1.** Issue instructions to concerned officials for providing the weekly / monthly JMR data of TSS end meters to SLDC.
- 2. In case of missing meter data and JMR data, Nodal officer shall send weekly / monthly meter data through email within two days on request of SLDC.
- 3. 21 Nos. ABT meters installed at TSS end for the month of August-2023 are not communicating with SLDC AMR system. Also, manually downloaded meter data of these TSS is not received by SLDC despite repeated requests from SLDC.
- **4.** Provide AMC for AMR system of meters installed at TSS and GSS end for successful downloading of meter data.

Railway is requested to apprise the Committee on the status of above issues.

[Action :Railway]

8.3 NON-RECEIPT OF ABT METER DATA OF SOLAR GENERATING STATION:- SLDC is not receiving the meter data of some pooling stations qualified for RE DSM. The list of missing data of meters has already been emailed on monthly basis but, SLDC is not receiving the meter data timely. The list of meters whose data is not received at SLDC is as under:

Sr. no.	Feeder Name	Location	Meter No
1	VIVAAN SOLAR -1 MAKDON	132KV S/S MAKDON	MPC55922
2	VIVAAN SOLAR -2 MAKDON	132KV S/S MAKDON	XC529587
3	33KV VIVAAN SOLAR -1 TARANA	132KV S/S MAKDON	XD501478

DCC, Indore is requested to take up the matter with concerned officials of West Discoms for providing data to SLDC.

[Action: West Discoms/ MPPTCL]

8.4 TIME DRIFT IN ABT METER INSTALLED AT THE POOLING STATIONS OF WIND AND SOLAR GENERATING STATIONS AND SLIDING WINDOW PROBLEM: The ABT meters installed at the following Pooling Stations of Wind and Solar Power Project has time drift and thus not recording the correct data. SLDC has requested to QCA / Generators with copy to concerned licensee vide letter no 07-05/REG-201/147 dated 25/01/2021 and letter no 07-05/REG -201/2215 dated 30.11.2021 for time synchronization of the ABT meters with GPS so that correct DSM account of these Wind and Solar Projects is issued by SLDC.

Sr.	FEEDER	SUBSTATION	ZONE	Meter No.	TIME DRIFT
-----	--------	------------	------	-----------	------------

no.			(Discom)		IN MINUTES
		132KV S/s		VD574050	447.00
1	UJAAS I SUSNER	Susner	WZONE	XB571653	417.00
	33KV MARUTSHAKTI	33KV			220.00
2	CHANDWASA	CHANDWASA	WZONE	XC502303	330.00
		132KV S/s			169.00
3	UJAAS-1 BERCHHA	BERCHA	WZONE	XB571652	168.00
		132KV S/S			137.00
4	UJAAS -II ICHHAWAR 33 KV	ICHHAWAR	CZONE	MPC59975	137.00
		132KV S/s			118.00
5	GLOBUS STEEL & POWER	SITAMOU	WZONE	XC562469	110.00
		220KV S/S			
		RAJGARH			93.00

	33KV TODAY CLEAN ENERGY	220KV S/S			21:00
8	FDR-II	BAROD	WZONE	XD511507	21.00

Further, ABT meters installed at the following Wind and Solar Generating Stations are recording the 15 minutes block wise data on sliding window principal thus blockwise data do not match with midnight data. SLDC has requested to Generators with copy to concerned licensee vide letter no. 2353 dated 31/08/2019, letter no. 2771, dated 16/10/2019, letter no. 809 & 810 dated 03/06/2020 and letter no 07-05/REG -201/2215 dated 30.11.2021 for immediate replacement of these ABT meters.

Sr.No.	FEEDER NAME	SUBSTATION	ABT METER No.	ZONE	QCA NAME

Licensees are requested to take-up the issue with concerned officials for time synchronization and replacement of ABT meters. Further licensees are requested to provide monthly status of those meters in which correction of time drift and replacement/ reconfiguration of meters based on sliding window principle were done.

[Action: West & Central Discoms / MPPTCL]

8.5 VERIFICATION OF CAPTIVE STATUS OF GENERATING PLANTS AND THEIR

USERS: SLDC representive inform that previous OCCM_85, The Hon'ble M.P. Electricity Regulatory Commission vide order dated 24.03.2023 has authorized Chief Engineer (SLDC), MPPTCL, Jabalpur as the "Designated Authority" under Regulation 5.1 of the Madhya Pradesh Electricity Regulatory Commission (Verification of Captive Generating Plants and Captive Users) Regulations 2023 for determination of the captive status of Captive Generating Plants and Captive Users. The Hon'ble Commission vide aforesaid order has also directed that Designated Authority shall intimate the fullfillment of condition in regard to the captive status to the Captive Generating Plant / Captive Users and the Distribution Licensee by the 15th July 2023. Hon'ble MPERC has issued the procedure for verification of Captive Status of Generating Plants and Users which is applicable for FY-2023-24.

SLDC vide letter no. 462 dated 13.04.2023, 587 dated 08.05.2023, 805 dated 20.06.2023 and 927 dated 12.07.2023 has requested the commercial sections of Discoms to provide the informations in respect of Captive Generating Plants and Captive Users under area of their jurisdiction for verification of captive status of Generator and Users so that information could be submitted timely to Hon'ble Commission. The required information of CPP has been received only from West Discoms but not received from Central & East Discom.

DCC of Central & East Discom is requested to take up the matter with their commercial sections for submission of information to SLDC.

[Action: East & Central Discoms]

ITEM NO. 9: SCADA and E&T RELATED ISSUES

9.1 INTEGRATION OF INTERFACE ENERGY METERS INTO RTUS FOR PROVIDING REAL TIME DATA TO SLDC SCADA/EMS SYSTEM: As per WRPC decision, The Interface Energy meters installed at interface points are to be integrated into SCADA/EMS system installed at SLDC Jabalpur. By implementing this, all the interface points of STU with ISTS, real time data of interface meters

can also be integrated in SCADA for better management of drawl of State from the Regional Grid. Further WRPC is constantly monitoring the progress regarding installation of Interface Energy meters at interface points with SCADA/EMS system. The list of interface point where integration is to be done is provided earlier and again enclosed herewith **as annexure-I**. However integration of energy meters of Interface point with RTUs for real time display of energy meter reading at SLDC SCADA/EMS system has been done at following locations

- (1) 132 KV Rajghat-Lalitpur
- (2) 400 KV Birsinghpur-Damoh(PG)1
- (3) 400 KV Birsinghpur-Damoh(PG)2
- (4) 400 KV Birsinghpur-KSTPS-1
- (5) 400 KV Birsinghpur-KSTPS-2
- (6) 400 KV Sagar-Bina PG
- (7) 400 KV Sagar-Satna PG
- (8) 400 KV Katni-Damoh PG

The matter regarding integration of energy meter with RTU at MPPGCL and MPPTCL S/s was also discussed in the meeting dtd. 23.12.21 and various OCCM at SLDC and list of interface point have already been shared to official of MPPGCL and MPPTCL.

During the meeting, it was decided that the integration work of Interface meters with RTUs at all the interface point /Drawl point shall be carried out at the earliest. MPPGCL and MPPTCL are thus requested to kindly provide progress in the matter.

MPPGCL official are requested to provide the current status regarding integration of Energy meter at STPS at the interface point of 400 KV Feeder Itarsi(PG), Seoni (PG), and Koradi (MH) and providing real time telemetry data at SCADA system installed at SLDC.

- **9.2 REPLACEMENT OF RTUS IN THERMAL POWER STATIONS:-** The matter was taken up by SLDC in various OCCM meetings as well as in separate SCADA and communication meetings held with power station officers and status as per the last OCC Meeting is summarized hereunder.
 - (i) STPS: it was informed by MPPGCL they are exploring the possibility of integrating the telemetry of thermal Power Stations through existing SCADA system at Power stations at STPS PH-IV.
 - (ii) SGTPS: Procurement of New RTU is in process and is under budgetary offer stage. It is requested to kindly provide present status and time line regarding procurement of RTU.
 - (iii) ATPS:- Procurement of RTU is in process and shall be completed at the earliest. It is requested to kindly provide present status and time line regarding procurement of RTU.

In view of the above, it is requested to kindly provide present status and expedite the procurement of RTU of ATPS and STPS at the earliest.

MPPGCL is thus requested to provide current progress in the matter.

9.3 ARRANGENEMENT OF TELEMETRY OF IMPORTANT 220KV SUB STATIONS & 132KV S/S HAVING INJECTION FROM RENEWABLES/CAPTIVE POWER PLANTS OR HAVING INTERDISCOM FEEDERS /TRACTION FEEDERS:- The telemetry of Birsingpur HPS was commissioned, however the telemetry of Birsingpur HPS is currently not available due to RTU shifting work and some issue in 48 V DC Charger. MPPGCL informed that the 48 V DC Chargers is being replaced with a new Charger. New charger has been procured and connection needs to be done.

MPPGCL are requested to provide current progress in the matter.

The telemetry of Zinna HPS is not available at SLDC SCADA System due to due to some issue in PLCC Channel. Please provide the current Status.

Action: - MPTPCL, ED (O&M: Gen), MPPGCL

9.4 UPGRADATION OF EXISTING RTUS & DISCREPANCY IN TELEMETRERED VALUES RECEIVED FROM DIFFERENT EHV S/S & POWER STATIONS: The present status of telemetry discrepancy including upgradation requirement is enclosed herewith as Annexure-II. The list of major telemetry discrepancies is as given below:-

(a) MPPGCL Generating Substations :-

1. SGTPS:-

1.Sr. No.	Description	Unit	Pending since
1	XFMR 220 /33, STN XFMR	СВ	15 month

(b) Transmission/ other Generating Substations :-

SI No.	Name of Substation	Name of feeders/transformers
01	400 KV KATNI S/s	Bus 2 Voltage and Frequency is not available at SLDC SCADA System
02	220 KV SATNA S/s	Katni Feeder MVAR and CB not available

Action: - MPPTCL, MPPGCL

9.5 EXTENSION OF RGMO/FGMO SIGNAL TO SLDC/WRLDC:- The extension of RGMO/FGMO signal of following generating units is still pending: -

S.No.	Name of Generating	Unit.No.	MPPGCL response in last OCC
	Station		
1	SGTPS	1,2,3,4	MPPGCL informed in last six OCC meetings that it is under tendering process & telemetry integration of RGMO/FGMO signal shall be completed within 3-4 months. However, no progress in the matter has been observed even after lapse of one and half year period.
2.	Singha Ji Phase 2	3, 4	MPPGCL informed in last 6 OCCM that matter has been taken up with L&T to initiate the work at the earliest & the integration work will be done when the units will be taken on operation. MPPGCL is requested to update the progress in this matter.
3	Bargi Unit	2	RGMO status is not available due to wiring related issue in panel.

9.6 LONG OUTAGE OF RTUS, PROBLEM IN DATA AND VOICE CHANNELS & INTERMITTENT TELEMETRY:- As per CERC communication regulation 2017, availability of telemetry is required to be ensured more than 99.9%. However following RTUs are either out since very long time or are intermittent:-

S.No.	Name of RTU	Remarks	Telemetry Availability %
1	Birsingpur HPS	Out since more than months	20 %
2	132 KV Ingoria	Intermittent	60%
3	132 KV Bijawar	Intermittent	36 %
4	132 KV Khanooj	Intermittent	55%
5	220 KV Pitampur Sec -III	Intermittent	58%
6	132 KV Zinna	Intermittent	0%
7	132 KV Bara malhera	Intermittent	32%
8	132 KV Amarpatan	Intermittent	71%
9	132 KV Bamore	Intermittent	79%
10	132 KV Sailana	Intermittent	48 %
11	132 KV Raghogarh	Intermittent	21%

12	132 KV Momenbarodia	Intermittent	72%
13	220 KV Sidhi	Intermittent	63 %
14	132 KV Rewa	Intermittent	39 %
15	132 Niwari	Intermittent	73 %

As per WRLDC directives poor telemetry availability (below 95%) is to be treated as violation of grid code as per Clause 4.6.2 of IEGC and WRLDC instructed SLDC to comply the same and to initiate necessary action as per grid code to ensure round the clock availability of telemetry. All grid users are therefore requested to take necessary action to ensure uninterrupted round the clock telemetry availability.

9.7 NON AVAILABILITY VOICE COMMUNICATION BETWEEN SLDC TO BANSAGAR -IV

(ZINNA) HYDEL POWER STATIONS:- It is to inform that as per CERC communication regulation 2017, availability of communication channel is required to be ensured more than 99.9%. However, despite constant pursuance, the PLCC voice communication between SLDC to Bansagar-IV (zinna) has not been established so far. The matter has been also discussed with communication division Satna and it has been informed that due to multiple breakage in coaxial cable and faulty LMU unit, PLCC link is currently not in working condition. However it is pending for more than two years.

MPPGCL is thus requested to provide current progress in the matter.

9.8 RECTIFICATION/CONFIRMATION OF READINESS OF OPGW LINKS

S.No.	OPGW LINK	Action	Remark
1.	220 KV Satna-Katni	Replacement of	ок
		OPGW cable between	
		220 KV Satna-Katni	
2.	400 KV Bhopal -Bina	Shifting of traffic from	Confirmation and readiness pending.
		Old link to newly	,
		constructed Link by	
		MPPTCL	
3.	400 KV Pithampur	Repairing of 22 faulty	No confirmation from field has been
	Indore	fibers out of 24 Fibers	received and Repairing is pending

MPPTCL is thus requested to provide current progress in the matter as testing for the same is pending for more than four months.

9.9 TELEMETRY OF RAILWAY TSS SUB STATIONS: - The Reliability of telemetry of existing 73 Nos Railway Traction Sub Stations need to be improved by railway for monitoring of drawl by each TSS and also monitoring of demand of railway in MP. However telemetry availability of Railway TSS is need to be improved.

Railways are requested to ensure reliable telemetry of existing Railway TSS. Further it is to mention that redundant link shall be established as IP scheme has already been provided by this office so that both at a time and through one channel it should report to SLDC Jabalpur and from another channel it should report to Back- up SLDC Bhopal rather to explore the possibility of automatic switching of link at SLDC Jabalpur from both dedicated link.

[Action :- Railway]

9.10 INFORMATION REGARDING PMU'S FOR THE SECOND PHASE OF URTDSM

PROJECT: - SLDC has provided the list of PMUs proposed to be installed under the URTDSM Phase-II project to be implemented by PGCIL and PGCIL vide email dtd. 21.07.23 has requested to provide the requirements of PMUs by 04.08.23 so that upgradation of PDC/Control Centre and analytics shall be done & requested to verify the list of PMUs and provide the information regarding PMUs requirement for upcoming substations in next 3 years through UO Note dtd. 02.08.23. Further SLDC have sent the remainder UO note dated 23.08.2023 regarding the same information. However the desired details have not yet been provided to this office.

[Action:-Planning & Design, T&C]

9.11 DETAILS REGARDING WR-UNMS:- Power grid vide email dated 30.08.2023, informed that PGCIL is implementing the WR-UNMS project as approved in the 15th NCT meeting and desired the details of existing communication equipment as per the format sent through mail dtd 31.08.23 by this office. Therefore, it is requested to kindly share the details of existing communication equipment.

[Action :- T&C]

ITEM NO 10 : DATE AND VENUE OF NEXT OCC MEETING : In 86th OCC, the roster for the upcoming OCCM was discussed & finalized in the meeting which is as detailed below. The venue of the same shall be decided in the meeting. It is also proposed that the OCC members shall host the alternate OCC meeting.

Sub: Guidelines for Resource Adequacy Planning Framework for India-reg.

Sir/Madam.

The Ministry of Power has issued Electricity (Amendment) Rules, 2022 on 29th December, 2022.

- 2. In exercise of the powers conferred under the Rule 16 of Electricity (Amendment) Rules, 2022, the Guidelines for Resource Adequacy Planning Framework for India, framed in consultation with Central Electricity Authority (CEA), are hereby issued. The guidelines are placed at Annexure.
- These guidelines shall be followed by all the institutions and stakeholders, who shall ensure sufficient tie up of capacities to meet resource adequacy requirements on different time horizons.
- This issues with the approval of Hon'ble Minister of Power and New & Renewable Energy.

Fncl: As above

Yours sincerely,

(Hemant Kumar Pandev) Chief Engineer (R&R)

Tel. No. 011-23710389

Copy to:

- 1. Secretary, Ministry of New & Renewable Energy, New Delhi
- 2. The Chairperson, CEA, New Delhi
- 3. The Secretary, CERC, Chanderlok Building, Janpath, New Delhi
- 4. Secretaries of All State Electricity Regulatory Commissions/JERCs

Copy for information to:

- 1. PS to Hon'ble Minister of Power and NRE
- 2. APS to Hon'ble Minister of State for Power & Heavy Industries
- Sr. PPS to Secretary(P)/ PPS to SS&FA/ PPS to AS (EC&ET/Hydro)/ PPS to JS (Thermal/Distribution)/ PPS to JS (Trans)/ PPS to JS (Hydro) / PPS to EA/ PPS to CE (OM)
- 4. All DS/Directors, Ministry of Power
- 5. Technical Director, NIC (with the request to publish it on Ministry of Power's website)

ANNEXURE

GUIDELINES FOR RESOURCE ADEQUACY PLANNING FRAMEWORK FOR INDIA

(Framed under the Rule 16 of Electricity (Amendments) Rules, 2022)

JUNE 2023

INDEX

SECTION – 1: Introduction

SECTION – 2: Resource Adequacy Plan to arrive at optimal capacities in the long-term and fulfil Resource Adequacy

SECTION– 3: Institutional mechanism for Resource Adequacy and Compliance Monitoring

SECTION – 4: Guidelines for Procurement of Required Resources

ANNEXURE A: Key design parameters for RA framework

ANNEXURE B: Determination of LOLP / NENS, Optimal Planning Reserve Margin (PRM) and Resource adequacy targets

ANNEXURE C: Determination of capacity credits for Renewable resources

ANNEXURE D: Marginal Cost of Reducing Load Shedding

ANNEXURE E: Methodology of Preparation of Resource Adequacy Plan

ANNEXURE F: Resource Adequacy Implementation Timeline

In exercise of the powers conferred under the Rule 16 of Electricity (Amendment) Rules, 2022, the Ministry of Power, Government of India, in consultation with Central Electricity Authority (CEA) hereby issues the guidelines for Resource Adequacy for the Indian electricity sector. These guidelines shall be followed by all institutions and stakeholders, as provided in these guidelines.

SECTION - 1

Introduction

- 1.1. For the past few years, India has been the fastest growing large economy in the World; and the growth will continue. Currently, it is the fifth largest economy in the World; and it is poised to become the third largest economy by 2030. This will only be possible if there is sufficient electricity to power this growth. It is essential that generation capacity is added at a pace matching the growth in demand- and in fact slightly ahead of the demand; so that the shortage of electricity does not slow down growth. Resource Adequacy planning is designed to ensure this. The guidelines aim to achieve the following key objectives:
 - 1.1.1. Energy for growth: It is necessary to timely add adequate generation capacity to meet the projected demand while maintaining necessary reserves.
 - 1.1.2. It is incumbent upon the DISCOMs to supply 24 X 7 reliable power to its consumers. All DISCOMs are duty bound to tie up sufficient capacity to meet the demand of its consumers. If any DISCOM does not do so, it is failing in its duty. Compliance to the Resource adequacy norms and Guidelines shall ensure that DISCOMs tie up sufficient capacity to meet the demand of the area they are licensed to serve. Rights of Electricity Consumers Rules, 2020 prescribe payment of compensation to consumers for avoidable load shedding.
 - 1.1.3. The capacity which the DISCOMs tie up shall be a judicious mix of long/medium and short term contracts to ensure security of supply to their consumers at least cost. Over reliance on the electricity market is to be avoided.
 - 1.1.4.As a part of its Nationally Determined Contributions (NDCs) to combat climate change, India has pledged that by 2030 it will have 50 percent of its power generation capacity coming from non-fossil sources. Accordingly, all obligated entities must fulfil their Renewable Purchase Obligation (RPO). Compliance with RPO will also include compliance with targets for Roof top solar and other Distributed Renewable Energy segments.

- 1.2. Resource Adequacy means tying up sufficient capacity to reliably serve expected demand of the consumers in the DISCOMs license area in a cost effective manner. Reliability is measured through the instances/probability of system peak exceeding the contracted capacity that is effectively available at a National/State level. The guidelines aim to establish a Resource Adequacy framework for power procurement by distribution licensees, ensuring a reliable operation of the power system across all timeframes. The Resource Adequacy exercise will assess the required capacity to be contracted on long term, medium term, and short-term basis. A key aspect of resource adequacy planning is to ensure that adequate generation capacities are available, round-the-clock, to reliably serve demand, under various scenarios. This translates into requirement of an adequate reserve to cater to varying levels of demand and supply conditions prevailing in the grid.
- 1.3. The resource adequacy framework lays down the optimal capacity mix required to meet the projected demand at minimum cost. New generation capacities, energy storage and other flexible resources needed to reliably meet future demand growth at optimal cost to the system will be timely assessed. It must also incorporate likely retirement of existing capacity on account of completion of economic life.
- 1.4. Procurement actions according to Resource Adequacy framework must be taken up timely by DISCOMs so that generation capacity becomes available well before its requirement to meet projected growth.
- 1.5. The implementation of these guidelines shall be ensured by the Appropriate Commission.

SECTION - 2

Resource Adequacy Plan to arrive at optimal capacities in the long-term and fulfil Resource Adequacy

- 2.1 The DISCOM will draw up the demand profile; the demand growth rate; the present contracted capacity and the quantity being procured from the Power Exchanges. The plan shall be drawn up keeping in view the fact that gratuitous load shedding entails penalties as per the present Rules-therefore load shedding is not an option.
- 2.2 The plan will undertake a least cost generation optimization to meet the demand such that it minimizes the overall system cost including operations and maintenance costs, costs to procure spinning reserves, fuel costs, start-up, and shut-down costs of generating units. The optimization includes all constraints related to power plant operations like ramp-up / ramp-down limits, start-up/ shut-down limits and their costs, generation limits, energy storage operations, interconnection limits (import/export), renewable addition(RPO) targets, Solar Rooftop/ distributed generation capacities, retirement schedules of existing generation plants, planning reserve margin etc. The Resource Adequacy exercise shall have a planning horizon of 10 years on a rolling basis.
- 2.3 A consideration to include energy storage and other flexible resources, which is necessary in balancing out the variability and intermittency of RE, should be included for increasing reliability and reducing system costs.
- 2.4 Resource adequacy shall be determined based on the resource availability and accessibility after taking into account the possibility of sharing of resources from other utilities/ states.
- 2.5 The Resource Adequacy Plan will lay down the **quantum and type of resources** required in the portfolio of a distribution licensee to meet the demand in an optimal (least cost and secure) manner. The plan shall give the **year-on-year optimal generation** (conventional plus Renewable) and **storage capacities required to meet the system demand** and the **planning reserve margin** securely and at least cost.
- 2.6 The data requirements and methodology for preparation of Resource Adequacy Plan have been provided as Annexure E.

SECTION - 3

Institutional mechanism for Resource Adequacy and Compliance Monitoring

- 3.1 The Central Electricity Authority shall publish Long-term National Resource Adequacy Plan (LT-NRAP) which shall determine the optimal Planning Reserve Margin (PRM) requirement at the All-India level conforming to the reliable supply targets.
 - a) The report shall publish the national-level PRM as a guidance for all the States/UTs to consider while undertaking their RA exercises.
 - b) The report shall also publish the Optimal Generation mix for the next 10 years required to ensure that the national-level system is RA compliant while meeting the All-India demand at least-cost. This shall guide capacity buildout investments in the country.
 - The report shall also publish the capacity credits for different resource types on a regional basis.
 - d) The report shall specify the State/UT's contribution towards national peak.
 - e) The LT-NRAP shall be updated annually.
- 3.2 NLDC shall annually publish a one-year look-ahead Short-term National Resource Adequacy Plan (ST-NRAP) which shall include parameters such as demand forecasts, resource availability based on under-construction status of new projects, planned maintenance schedules of existing stations, station-wise historic forced outage rates and decommissioning plans.
- 3.3 The hourly demand forecasts used by CEA and NLDC shall be aligned with the projections furnished by individual Distribution Licensees to CEA and NLDC. The STU / SLDC, on behalf of the distribution licensees in the State shall provide to CEA and NLDC by the month of May every year, the details regarding demand forecasts (peak and energy requirement) for the next 10 years, assessment of existing generation resources and such other details as may be required for the LT-NRAP and ST-NRAP.
- 3.4 The LT-NRAP and ST-NRAP shall be published by the month of July for the period starting from the month of April in the subsequent year.
- 3.5 The LT-NRAP shall allocate the share in national peak for each state. In States/UTs where there are multiple distribution licensees, the respective STU / SLDC shall allocate each

distribution licensee's share in the national peak within 15 days of the publication of LT-NRAP.

3.6 Based on the share in national peak provided in LT-NRAP, each distribution licensee shall plan to contract the capacities (peak contribution * (1 + National level PRM)) prescribed by LT-NRAP or higher to be procured to meet their Resource Adequacy Requirement (RAR) at the time of national peak. The distribution licensees shall demonstrate to the SERC/JERC 100% tie-up for the first year and a minimum 90% tie-up for the second year to meet the requirement of their contribution towards meeting national peak. Only resources with long / medium / short-term contracts shall be considered to contribute to the RAR.

The share of long-term contracts is suggested to be in the range of 75-80% of the total supply side RAR, or as specified by the respective SERC/JERC. The medium-term contracts are suggested to be in the range of 10% - 20% of the total supply side RAR while the rest can be met through short-term contracts. Power procurement through the power exchanges, such as the Day-Ahead Market segment, shall not be considered to contribute to RAR. However, these ratios of long, medium and short term contracts may be reviewed periodically based on further experience.

For subsequent three years, the distribution licensees shall furnish a plan to meet estimated requirement of their contribution to meet national peak for SERC/JERC approval.

- 3.7 Each Distribution licensee shall undertake a Resource Adequacy Plan (RAP) for a 10-year horizon (Long-term Distribution Licensee Resource Adequacy Plan (LT-DRAP)) to meet their own peak and electrical energy requirement. The plan shall be vetted/validated by Central Electricity Authority for leveraging the benefit of national level optimization for the Distribution licensees. The LT-DRAP shall be undertaken as per the methodology outlined in Annexure-E of these guidelines.
- 3.7.1 The distribution licensees shall take inputs if required from the LT-NRAP like PRM, capacity credits, etc., while formulating their LT-DRAP and submit their plans to CEA by the month of September for the period starting from the month of April in the subsequent year.

¹ This value is subject to change from time to time, as guided by CEA

- 3.7.2 After being vetted by CEA, the plan LT-DRAP along with details for meeting the RAR of national peak for the utility may be submitted to SERC/JERC by the month of November for the period starting from the month of April in the subsequent year for their approval.
- 3.7.3 Distribution licensees are free to consider higher planning reserve margins, subject to approval from the SERC/JERC.
- 3.7.4 The LT-DRAP shall be carried out by the distribution licensees on an annual rolling basis considering the contracted capacity as a part of the system and shall optimize for additional capacity required.
- 3.8 Distribution licensees, through the LT-DRAP, shall also demonstrate to the SERC/JERC, their plan to meet their Peak demand and energy requirement with a mix of long-term, medium-term and short-term contracts, including power exchanges. The composition of the contracts will depend upon the load curve of each distribution utility. The share of long-term contracts is suggested to be atleast 75% of the required capacities as per LT-DRAP or as specified by the respective SERC/JERC. The medium-term contracts are suggested to be in range of 10-20% while the rest can be met through short-term contracts. Distribution licensees shall also demonstrate their plans to contract existing capacities and plans to build or contract future capacity for the planning horizon.
- 3.9 The share of long-term contracts in the entire mix of the contracts of the utility shall be atleast the maximum of the quantum of long term contracts determined for meeting RAR of national peak and quantum obtained from LT-DRAP for fulfilling own energy and peak requirement.
- 3.10 The Distribution Licensee shall submit the details of the contracted capacities for the ensuing year for meeting RAR of national peak to the respective STU / SLDC after approval of respective SERC/JERC by the month of January. The STUs / SLDCs shall aggregate the total contracted capacities at the state level and submit the information to the respective RLDC. The RLDCs shall aggregate the capacities at the regional level and submit the information to the NLDC by the month of February. NLDC shall aggregate the capacities at the national level and check compliance with ST-NRAP and identify shortfall for the ensuing year, if any. In case of shortfall, NLDC shall either communicate the shortfall to the SERC/JERC for compliance or facilitate a national-level auction for the balance capacity² with participation from distribution licensees with capacity shortfall³. The

² balance capacity = $(1 + National PRM) \times National Peak - sum of contracted capacities$

contracting for the balance capacity shortfall shall be completed by the month of March prior to the start of the delivery year (1st April). NLDC shall come out with a methodology to carry out national level auction for the procurement of the balance capacity.

- 3.11 The STUs/SLDC shall prepare one-year look ahead ST-DRAP (Short term Distribution Resource Adequacy Plan), on an annual basis for operational planning, at the state level based on the LT-DRAP study results. The SLDC shall review the ST-DRAP on a daily, monthly and quarterly basis based on actual availability of generation resources.
- 3.12 In terms of Section 86(1)(b) of the Electricity Act, 2003, the Appropriate Commission may ensure the compliance of Resource Adequacy Planning by the distribution licensees. The Appropriate Commission may also specify the non-compliance charges."
- 3.13 The CERC in consultation with the Forum of Regulators (FOR) may come out with model regulations for implementing the resource adequacy process in the States/UTs and the distribution utilities.
- 3.14 A schematic illustrating the Resource Adequacy implementation timelines is given in **Annexure F**.

capacity shortfall =

 $^{(1 +} National\ PRM) \times Licensee\ Demand\ during\ National\ Peak\ - sum\ of\ contracted\ capacities\ by\ the\ licensee$

Section 4

Guidelines for Procurement of Required Resources

- 4.1 The outcome of the Resource Adequacy Studies would provide the **quantum and type of generation resources** required in the portfolio of a distribution licensee to meet the demand in an optimal (least cost and secure) manner. The future capacity mix may comprise of existing capacities, planned capacities and capacity addition required to meet the increasing demand of the utility considering appropriate gestation period of the generation resource.
- 4.2 The distribution licensee shall contract the optimal portfolio of resources to meet its future demand and Resource Adequacy Requirement (RAR) obligations, based on the output derived from the LT-NRAP study results. Long / medium / short-term firm contracts of generation resources shall be considered to contribute to the RAR. Power procurement through the power exchanges, such as the Day-Ahead Market segment, shall not be considered to contribute to RAR.
- 4.3 The distribution licensee shall contract additional resources source-wise if required based on the LT-DRAP to meet its own peak demand.
- 4.4 The states can either put up their own generation capacities for meeting their future demand or the respective state distribution licensee shall procure the required resources through the tariff based competitive bidding guidelines for procurement of power notified under the provisions of section 63 of the Electricity Act 2003.
- 4.5 The power capacity procurement from renewable energy sources for fulfilling the RPO targets shall be carried out taking into account the RE potential in that State and fungibility within the RE resources as per the latest RPO order. The power procurement corresponding to wind, solar PV, Wind solar Hybrid, Round the Clock (RTC) power shall be carried out as per the guidelines for tariff based competitive bidding process for procurement of power from respective grid connected wind, solar PV, Wind solar Hybrid, Round the Clock (RTC) power projects.
- 4.6 The Distribution Licensee can contract storage capacity corresponding to the results of LT-DRAP capacity addition requirement for future years as per the guidelines issued under the provisions of Section 63 of the Electricity Act, 2003 for procurement of energy from BESS through competitive bidding, from grid connected Projects.

- 4.7 The Distribution Licensee can contract power through Central Agencies / Intermediaries / Traders / Aggregators / Power Exchanges or through bilateral agreements / Banking arrangement with other distribution licensees. The Distribution Licensee can carry out power procurement on short-term and medium term basis through DEEP and PUShP portal.
- 4.8 The distribution licensee must ensure that procurement process for the projected demand is undertaken and completed sufficiently in advance so that the procured capacity becomes available when it is required to serve the projected load. The following table gives the number of years before which procurement process must be completed in advance as compared to the year of projected requirement for various types of generation and types of procurement:

Resource	Long Term	Medium Term
Coal/Lignite Based Capacity	7	2
Hydro	9	2
Solar	2	1
Wind	3	1
PSP	5	3
Other Storage	2	1
Nuclear	9	3

ANNEXURE A

Key design parameters for RA framework

- **Reliability** is key to power systems operations and hence adequacy of supply needs to be maintained at all points in time. There could be unavoidable outages, due to unforeseen circumstances and reasons, but the resource adequacy planning should be such that these outages (loss of load events) are minimized..
- Loss of Load Probability (LOLP) is a measure of the probability that a system's load may exceed the generation and firm power contracts available to meet that load in a year

Parameter	Definition
Loss of Load	Measure of the probability that a system's load may exceed
Probability (LOLP)	the generation and firm power contracts available to meet
	that load in a year. E.g., 0.0274 % probability of load being
	lost.

 Additionally, another metric which could be utilized in conjunction with LOLP is the Expected Energy Not Served (EENS).

Parameter	Definition
Parameter Expected Energy Not Served (EENS)	Expected amount of energy (MWh) that may not be served for each year within the planning period under study. It is a summation of the expected number of megawatt hours of demand that may not be served for the year. This is an energy-centric metric that considers the magnitude and duration of energy being not served, calculated in MegaWatt hours (MWh). The metric can be normalized (i.e., divided by total system
	load) to create a Normalized Energy Not Served (NENS) metric.

- "Normalized ENS(NENS)" is the total expected load shed due to supply shortages (MWh) as a percent (%) of the total system energy, and therefore represents an overall percentage of system load that cannot be served.
- Most systems in advanced electricity markets use LOLP / NENS as the RA planning criteria.
- To meet the prescribed standard of LOLP / NENS conditions, sufficient reserve margins need
 to be maintained in the system for adequately addressing the demand and supply variations.
 Planning Reserve Margin (PRM) is the predominant metric used to ensure adequacy of

generation resources in the system. PRM in a power system is expressed as a certain % of peak load forecast of the system.

• CEA, from time to time, publishes the desired values for reliability indices such as LOLP and NENS required for resource adequacy in India and accordingly estimate the PRM required to be maintained optimally at the national level. The LOLP and NENS values adopted by CEA for the purposes of the National Electricity Plan (NEP) are 0.2% and 0.05%, respectively.

Similarly, system studies can be undertaken by the utilities to determine the PRM through any scientific method, provided the reliability criteria (LoLP and NENS) are more stringent or as guided by CEA from time to time⁴. The methodology for conducting the Optimal Reserve Margin study is highlighted in **ANNEXURE B.**

_

⁴ In future amendments, once the RA process is established, utilities can conduct their own reliability studies to determine the optimal level of reliability (LoLP and NENS) of supply side portfolio as per the methodology prescribed in ANNEXURE A and ANNEXURE C. In case of any shortfall, NLDC can communicate to RLDCs/SLDCs the shortfall or facilitate a national-level auction for the balance capacity with participation from distribution licensees with capacity shortfall.

ANNEXURE B

Determination of LOLP / NENS, Optimal Planning Reserve Margin (PRM) and Resource adequacy targets

- The optimal level of "target" or "planning" reserve margins should be arrived at through measures such as "Loss of Load Probability (LoLP)" and Normalized Energy Not Served (NENS). Loss of load can happen due to various factors such as:
 - Forced outages/planned maintenance of conventional generation
 - Real time unforeseen excursion in demand/demand forecast errors
 - Generation forecast errors /RE intermittency
- A loss of load occurs when the system load exceeds available in a particular time.
 Appropriate LOLP / NENS metrics should be considered based on consultation with stakeholders and international best practices.
- The first step in determining the Resource Adequacy targets would be to determine the target generation capacities at a nominal Planning Reserve Margin using a **generation planning** model.
- Once the generation capacities are estimated, it becomes important to estimate the several demand-supply patterns and then determine if the required generation capacity in the system can always meet demand reliably by calculating the loss of load and energy not served. A natural outcome of the above objective is to construct many possible future scenarios based on the uncertainty surrounding the demand for power, intermittency of RE sources, availability of power plants, tie-lines, inter-state and inter-regional transmission constraints etc. These future scenarios shall be constructed based on following indicative parameters viz:
 - Demand variations / forecast errors
 - Hydro conditions (normal, wet, or dry years)
 - Planned and forced outages of power plants and interconnectors
 - RE Generation forecast errors, etc.
 - Multiple future scenarios should be created using stochastic models to account for uncertainty and analyse any occurrence of lost load. Each such future scenario is

established based on historical data. The key inputs for generating future possible states are as follows:

- **Demand volatility:** Uncertainty in demand can be built into the model through two categories, long-term uncertainty driven by underlying factors such as load growth forecasting errors, unanticipated economic growth, etc., and short-term uncertainty which may be defined as the sum of a typical (or mean) monthly load pattern for the day and the historical deviation observed from the mean load.
- Conventional generator outages: Planned outages and scheduled maintenance for thermal generators may be scheduled either based on historic patterns or during low demand periods based on a uniform probability distribution. For forced outages, Monte Carlo draws for each unit based on historical outage rates may be simulated.
- Variable Renewable Generation Intermittency: To capture the intermittency of solar and wind plants, PV, and wind generation data of past several years can be analysed and multiple scenarios which match the projected CUF levels may be created. Annual CUF projections may also be generated through Monte Carlo Draws based on the annual CUFs observed in the historical profiles.
- Availability of ATC for short-term import: In the distribution licensee-level / State-level planning, short-term import is limited to the available transfer capability. However, as there is no visibility about the power generation profile of other States, unpredictability in the availability of tie line power form other utilities and regions must be factored in. To incorporate the above-mentioned unpredictability, availability of each tie line for each hour can be derated by a factor drawn from a probability distribution using Monte Carlo Simulations. Details on the appropriate probability distribution to be considered may be provided by NLDC / CEA from time to time.
- Once the demand-supply projections / scenarios are established and the possible future states are predicted, a demand-supply matching simulation with the estimated capacities should be performed. The objective of such a simulation would be to use the capacities obtained from the Resource Adequacy Plan to meet the demand and assess the duration of the loss of load events and energy not served for each scenario and for the specified planning margin/capacity mix.
- The above process needs to be then iterated by **incrementing** the **planning reserve margin levels** until the **desired levels of LOLP / NENS** is achieved in the system. This iterative

- model would enable identification of a target PRM level as per the desired LOLP figures. An illustrative flowchart of the process is shown in Figure 1.
- While arriving at the target LOLP / NENS figures, consideration should be given to system costs. The objective should be to have an optimal level of Reserve margins which would represent the optimal trade-off between system costs and reliability. For this purpose, an evaluation of the marginal cost of reducing load shed is required. The PRM at which the marginal cost of reducing load shed is equal to the Value of Lost Load as defined by the distribution licensee is the economically optimal PRM. The procedure of calculation of marginal cost of reducing load shed is given in Annexure **D**.

Figure 1: Flowchart of the Optimal Reserve Margin Study

ANNEXURE C

Determination of capacity credits for Renewable resources

- This step is important for determining how much of energy-limited resources (hydro, wind, solar, storage) may count toward resource adequacy requirements. Generation planning is set to become more complex as larger amounts of weather-based, variable renewable generation are added to the system. This is because resources such as wind and solar PV are intermittent, and their generation may not coincide with periods of peak demand.
- Each generator can provide a "firm capacity," which represents the amount of power the generator can reliably provide. Capacity credit expresses firm capacity as a percentage of the installed nameplate capacity.
- Following are the various methodologies to determine capacity credits of Renewable energy adopted internationally. These methodologies can also be extended to demand response resources.
 - a) Capacity credit approximation with Top Demand Hours: In this case, a basic approximation of capacity credit can be obtained by averaging the historical contribution of a generator / generator class during peak demand hours. The selection of how many peak demand hours to include, however, often varies across geographies.
 - Hours: In this case, consideration is given to the fact that periods of system stress occur when high demand coincides with low renewable energy generation. A metric called 'net load' is defined as 'total renewable energy generation subtracted from overall demand', which must be met from dispatchable resources like

thermal plants, hydro plants, etc. Due to system stress caused by the duck curve, net load is a better proxy for system stress for new capacities than peak demand. In this method, capacity credit can be obtained by averaging the contribution of a generator / generator class during top net load hours.

c) Expected Load carrying capability: In this method, a model uses an hourly timeseries demand data for a particular period. The model also uses the availability of different generation resources in each hour of the year. Random outages of generators are also applied considering the historical and expected outage conditions. Determine supply matching is used to determine the LOLP of the system.

0.11

Each generator added to the system helps increase

At the same load level

ELCC

- To calculate capacity credit, the model first removes a generator from the system and calculates the system LOLP. This represents Point 1 in the system reliability curve, as shown alongside.
- the system and repeats the LOLP calculation. The additional generator increases system-wide firm capacity and resource adequacy, so the curve shifts right to Point 2 (system reliability is higher), and so it can accommodate more load at the previous LOLP (Point 4). The additional load that can be accommodated represents the generator's ELCC.
- The Capacity Factor Approximation with Top Net Load Hours can be considered to determine the capacity credits for new resources and the Top Demand Hours methodology can be considered to determine the capacity credits for existing resources. The ELCC method can be adopted later, once the required capabilities and data are available with the state utilities.
- The utilities may plan their firm capacity as per their contribution in the national peak which implies that the capacity credits of all resource types are to be calculated on the national-level load profile.
- The calculation of firm capacity to meet the Resource Adequacy Requirement (RAR) is shown below:

$$RAR = \sum_{i=1}^{num_solar} Solar_Capacity * Solar_Capacity_Credit$$

$$+ \sum_{i=1}^{num_wind} Wind_Capacity * Wind_Capacity_Credit$$

$$+ \sum_{i=1}^{num_thermal} Hydro_Capacity * Hydro_Capacity_Credit$$

$$+ \sum_{i=1}^{num_thermal} Thermal_Capacity * Thermal_Capacity_Credit$$

$$+ \sum_{i=1}^{num_nuclear} Nuclear_Capacity * Nuclear_Capacity_Credit$$

$$+ \sum_{i=1}^{num_storage} Storage_Capacity * Storage_Capacity_Credit$$

$$+ \sum_{i=1}^{num_other} OtherResource_Capacity * OtherResource_Capacity_Credit$$

$$+ \sum_{i=1}^{num_other} OtherResource_Capacity * OtherResource_Capacity_Credit$$

$$+ \sum_{i=1}^{num_other} OtherResource_Capacity * OtherResource_Capacity_Credit$$

$$+ \sum_{i=1}^{num_other} OtherResource_Capacity * Credit$$

$$+ \sum_{i=1}^{num_other} OtherResource_Capacity * OtherResource_Capacity_Credit$$

ANNEXURE D

Marginal Cost of Reducing Load Shed

• The marginal cost of reducing load shed is the effective increase in cost for every unit of load shed reduced. It is calculated as the increase in system costs by the reduction in load shed:

$$Marginal\ Cost = \frac{System\ Cost_{PRM_{i+1}} - System\ Cost_{PRM_{i}}}{ENS_{PRM_{i}} - ENS_{PRM_{i+1}}}$$

The economic optimal planning reserve margin is the planning reserve margin at which the
marginal cost of reducing load shed is equal to the value of lost load. Utilities can rely on
this planning reserve margin in case they decide to plan beyond the minimum PRM as
determined by CEA.

Illustration: An illustration of the calculation of marginal costs of reducing load shed is shown in Figure 2. The capacity expansion planning model is run for different PRMs between 2% and 20%. Based on the capacities obtained, the system costs are calculated. Demand-supply matching using these capacities on future scenarios created using stochastic simulations are used to obtain the total load shed (unmet energy). Based on the system costs and unmet energy (graph on the left), the marginal cost of reducing load shed (graph on the right) is calculated using the formula in C1. Assuming a Value of Lost Load (VoLL) of INR 140/kWh, the optimal PRM would be around 8%.

ANNEXURE E

Methodology of Preparation of Resource Adequacy Plan

- For preparation of Resource Adequacy Plans, data on the following needs to be obtained but not limited to:
 - a) Planning Reserve Margin as prescribed by CEA or as determined by the distribution licensee and approved by the SERC/JERCs.
 - b) Actual demand met by the state / distribution licensee in granular time block resolutions (hourly) for last 5 years
 - c) Estimated load growth during the planning period
 - d) Technical parameters of conventional generation plants viz. Name of plant, location (State/Region), Capacity (MW) (for existing and planned capacities), Auxiliary Consumption (MW), Maximum and Minimum Generation Limits (MW), Ramp Up and Ramp Down Rate (MW/min), Minimum up and down time, Plant Availability Factor (% of time), etc.
 - e) Under-construction capacity/retirement of generation capacity/contracted capacity/bilateral contracts.
 - f) Potential investment options, technologies, gestation periods and lifetime of different assets.
 - g) Capacities and generation profile of renewable generation
 - h) Capital costs, variable costs, O&M costs, reserve offers, start up and shut down Cost of generators, etc.
 - i) Historical forced outage rates and planned maintenance rates of generation capacities
 - j) Tie line details and transmission expansion plans
 - k) Spinning reserve requirements
 - 1) Renewable Purchase Obligation (RPO) and Energy Storage Obligation targets, etc.
- The hourly demand profile for the distribution licensee shall be projected over the planning horizon, based on the forecasted values of annual energy requirement and peak demand trajectory. The annual energy requirement and peak demand shall be forecasted using trend

method, time series, econometric methods, or any state-of-the-art methods. The projected hourly demand for the future years shall be used as inputs into the model. It shall be ensured that the generation expansion planning model chosen is capable of simulating on an hourly chronological resolution⁵. This is necessary to capture the behaviour of the system with respect to ramping of conventional generation, profiles of RE generation, behaviour of energy storage, etc.

- After establishment of demand profile for all future years, the model would undertake an
 optimization exercise to minimize the total system cost to meet the future demand adhering to
 all power system parameters. Following constraints should be considered while modelling:
 - O Planning Reserve Margin / Resource Adequacy Requirement: The Resource Adequacy Requirement (RAR) constraint shall ensure that the total Resource Adequacy (Generation capacity) of the distribution licensee fulfils the Planning Reserve Margin as determined by CEA or by the distribution licensee's own studies and approved by the SERC/JERC. The resource adequacy requirement for each distribution licensee is computed as:

 $RAR = contribution^6$ to forecasted national peak demand in $GW \times (1 + PRM)$

From the supply side, the RAR is the sum of the "firm capacity" or "capacity credits" of contracted / planned capacities (including renewables, storage, other resources such as demand response) along with derated interconnection limits (imports)⁷.

Both, supply side and demand side RAR shall match. The Thermal capacity credit is calculated by reducing the auxiliary consumption and the forced outage rate from the installed capacity. Planned outage rate is generally not considered, as planned maintenance may be carried out during low net-demand periods and thus may not affect reliability.

The capacity credits for generating resources and demand response resources to meet the national peak shall be estimated by CEA⁸. The capacity credits published by CEA for each resource type may differ between existing and new resources and between resources in different regions. For example, a solar based power plant in the southern

⁵ It is preferred to simulate all 8760 hours on a chronological resolution in a year. However, if computational challenges are faced, the States/UTs can select the representative periods which may be different for each state. The representative periods chosen are reflective of various projected demand and supply profiles for the base year and future years. Initially, hourly simulation is planned based on hourly data availability, however, the time granularity may be increased to sub-hourly provided there is availability of sub-hourly demand and RE generation data.

⁶ This is calculated as distribution licensee's demand at the time of national peak demand.

⁷ The calculation of firm capacity is provided in Annexure C

⁸ The methodologies that can be used to determine capacity credits for generating resources and demand response resources are outlined in **Annexure C.**

region will have a capacity credit which could be different compared to a solar plant in the northern region. Similarly, an upcoming wind-based power plant could have a different capacity credit compared to an already commissioned wind plant in the same region. Utilities shall use these capacity credits while planning to meet their RAR. For example, a distribution licensee having a PPA with an existing solar based power plant located in a southern state would use the capacity credit of existing solar based power plants in the southern region.

Portfolio balance constraints: The portfolio balance constraints shall ensure that the total generation within a control area of region/State/Distribution licensee and the import of power to the control area of region/State/Distribution licensee is equal to the sum of the demand, the exports from the control area of region/State/Distribution licensee, any energy not served and curtailment, for each hour.

RE Generation constraints: For renewable resources, such as solar and wind, the generation is constrained as per the hourly profile of the resource. Historic profiles of renewable sources shall be used to generate the hourly profiles. Additional constraints to ensure that the distribution licensee's overall renewable generation targets are met, shall also be included.

• Conventional Generation constraints:

- Unlike solar and wind, thermal resources are dispatchable. However, the thermal resources are bound by constraints such maximum and minimum generation limits, ramp rates, spinning reserve offers, plant availability and unit commitment decisions.
- The dispatch (energy offer) plus the reserve offer (specified through regulations) for each generator is constrained to be within the maximum and minimum generation limits. Generation between two consecutive time blocks also must be within the ramping capabilities of the resources. Unit commitment decisions, such as start-up/shut-down, minimum up and down times, etc., require binary variables to implement and are to be included. Additionally, generation units may have periods of outages which may need to be captured by using an availability factor.
- The capacity for each year needs to be tracked by a constraint which shall ensure that the capacity in a particular year is equal to the capacity last year plus any new capacity investment minus capacity retirement, if any.

- **RPO constraints:** Fulfilment of Renewable purchase obligation should be considered as one of the objectives of Resource Adequacy. Technology options like renewable generation for round the clock energy supply backed with storage (Battery and PSP), standalone renewable capacity along with hydro capacity for balancing renewable generation may be considered while carrying out resource adequacy exercise for distribution licensees.
- Storage constraints: Due to the intermittent nature of renewable generation, the need for resources which can store surplus energy and despatch the stored energy during low RE periods becomes vital. Storage charge and discharge at any instant are constrained by the storage level or the state of charge (SoC) of the storage resource, and the maximum charge / discharge limit. The resource can only discharge if there is sufficient energy present due to prior charging of the resource. To implement this, considering the chronological sequence of time is also important. Since storage resources convert electricity to other forms of energy, there are also some efficiency losses (round-trip efficiency) which shall be accounted for. Different technologies may have different discharge periods (energy limits), power outputs (maximum charge / discharge) and levels of efficiency.
- Operating (Spinning) Reserve constraints: Operating reserve constraints ensure that sufficient resources are in the system and kept online or on standby each hour to account for load forecast errors, intermittency of renewables or meeting contingencies in the real time. The thumb rule for operating reserve requirement shall be defined based on discussions with the state SLDC and shall be considered as an input parameter to the model.
- **Demand Response:** Potential for demand side management such as shifting of load or demand response can be considered while undertaking the Resource Adequacy Plan(RAP). The constraints such as periods when load shifting can occur, and the maximum quantum of load which can be shifted over a period shall be included.
